

## 100x more information – Zeiss Operating Microscope

The Dental Implant Clinic now has a state-of-the-art Zeiss Operating Microscope

‘The use of the operating microscope at The Dental Implant Clinic will be of tremendous benefit to our patients and referrers. The advantages of improved precision and ergonomics, ease of documentation, and the ability to communicate results with patients, staff and colleagues are clear, and will significantly improve treatment outcomes.’

Chris Lambert-Rose of  
The Dental Implant Clinic

The Dental Implant Clinic accepts referrals for:

- Implants
- Endodontics
- Periodontics
- Surgical Extractions
- Sedation
- Orthodontics

Phone 01225 448400 for a referral pack.

**We are a referral practice:  
Our patients are your patients**

**This is a state-of-the art microscope that will greatly enhance our ability to continue to deliver world-class service to our patients.**

The basic advantages of the microscope include:

- Precision treatments with much higher magnification
- Enhanced ergonomics
- Ease of digital documentation

In endodontics, magnification is essential for locating additional canals, exploration of dentine cracks, removal of old GP and fractured instruments, and repair of perforations.

In addition, the microscope can be used for almost any other procedure imaginable, increasing our ability to deliver world-class service in other areas of dentistry too.

The microscope has 5 magnification settings and a

Variable Xenon light source which provides fantastic illumination under the highest magnifications. It can also take still and video pictures to assist documentation and patient education.

The magnification is vastly greater than standard 2x loupes, which provide 4x more information than the naked eye. Our new operating microscope provides 100x more information than seen by the naked eye.
